Box No. I Basis of the report

1. With regard to the **language**, this report is based on the international application in the language in which it was filed, unless otherwise indicated under this item.
 - This report is based on translations from the original language into the following language , which is the language of a translation furnished for the purposes of:
 - international search (under Rules 12.3 and 23.1(b))
 - publication of the international application (under Rule 12.4)
 - international preliminary examination (under Rules 55.2 and/or 55.3)
2. With regard to the **elements*** of the international application, this report is based on (*replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report*):

Description, Pages

1-17 as originally filed

Claims, Numbers

1-10 as originally filed

Drawings, Sheets

1/8-8/8 as originally filed

a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing

3. The amendments have resulted in the cancellation of:
 - the description, pages
 - the claims, Nos.
 - the drawings, sheets/figs
 - the sequence listing (*specify*):
 - any table(s) related to sequence listing (*specify*):
4. This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).
 - the description, pages
 - the claims, Nos.
 - the drawings, sheets/figs
 - the sequence listing (*specify*):
 - any table(s) related to sequence listing (*specify*):

* If item 4 applies, some or all of these sheets may be marked "superseded."

2 INDEPENDENT CLAIM 1

- 2.1 The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claim 1 is not inventive in the sense of Article 33(3) PCT.

Document D1 discloses (the references in parentheses applying to this document):

A method of communicating information (see page 12, *in-band signalling*) within a physical link layer of a packet based communication system, comprising the steps:

- a) Employing a physical link layer transmitter to use an additional input data field within an idle data field of a data stream transmitted within the packet based communication system (see page 12, *Idle Word*); and
- b) Employing a physical link layer receiver to extract the additional input data field without corrupting information contained within the data stream (the receiver must in any case extract the information contained in the different Dx.y of an Idle word).

The subject-matter of claim 1 therefore differs from this known method in that:

The additional input data field substitutes existing bits in the idle data fields.

The problem to be solved by the present invention may therefore be regarded as the need of hardwiring non-standard signalling codes in the physical link layer transmitter/receiver.

The feature of having standard fields replaced by additional input data fields at the transmitter and restored at the receiver by an external entity (multiplexer/demultiplexer) is merely one of several straightforward possibilities from which the skilled person would select, in accordance with circumstances, without the

exercise of inventive skill, in order to solve the problem posed.

3 INDEPENDENT CLAIM 10

3.1 The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claim 10 is not inventive in the sense of Article 33(3) PCT. Claim 10 refers to the corresponding means for carrying out the method of claim 1. The subject-matter of claim 10 is therefore, and for the reasons above, not inventive.

4 DEPENDENT CLAIMS 2-9

Dependent claims 2-9 do not contain any features which, in combination with the features of any claim to which they refer, meet the requirements of the PCT in respect of inventive step (Article 33(2) and (3) PCT).
